

PRO-TEC SYSTEM ONE PAGER

Operating & Installation Instructions

WHAT'S INCLUDED:

- 1 - Three channel receiver (pager)
- 1 - Base unit (transmitter)
- 1 - Wiring harness
- 1 - Manual paging switch pod
- 2 - "AAA" batteries

Owner's Guide

This is a sophisticated 3-channel pager that will notify you if your security system has been triggered. It operates at 27 MHz and has an effective range of up to one mile under ideal conditions.

The receiver uses two AAA batteries that need to be installed under the sliding door on the rear of the unit. The base unit is installed in the trailer and uses its AM/FM antenna to broadcast to the receiver.

NORMAL USE

When the pager is turned on it will beep. The unit is now in the standby mode, and waiting for a transmission from the base unit. The pager will respond when the alarm system has triggered, and/or when the manual paging buttons in the vehicle is pressed. When the pager unit receives a page it will respond with beeps. The following chart will show you why you are being paged - you may quiet the pager by pressing the on/off switch. The pager will then return to the standby mode.

<i>Event</i>	<i>Explanation</i>
9 short beeps	Security system has triggered pager
3 groups of 3 beeps	Manual paging buttons were pressed
1 beep every minute	Pager has been triggered, but not checked by user
2 beeps every 5 minutes	Batteries are low and need to be replaced

Installation Guide

This is a sophisticated paging system. *Please take time to read this installation guide through prior to installing the unit.*

ELECTRICAL CONNECTIONS

Make all electrical connections prior to plugging the main wiring harness into the base unit.

RED (+).....12V constant power input

BLACK (-).....chassis ground

PURPLE (+).....siren

AM/FM antenna: Unplug the antenna from the radio and plug it into the port on the base unit marked "Antenna", then plug the supplied antenna cord into the port marked "Radio" and also into the back of the radio in the vehicle. Or plug separate antenna into base unit marked "Antenna".

Important Note

Do not power up transmitter before the antenna connections are made.

This may damage the transmitter.
